REMOTE CONTROLS

The Turchi remotes come in two different forms. One is the track remote which will operate the tracks of the machine. This is the safest way to load and unload the machines and lowers the risk with staff greatly. Great for maneuvering the machinery where you can stand further back to see the line in which you are working.

The second option remote is a full function remote where you can operate the machine holding the remote but without having to be in contact with the machine controls.
